

## RAIN IS A GOOD THING: ADJUST IRRIGATION TO ACCOUNT FOR WET WEATHER

How does your garden grow? Mother Nature certainly helps – and Cranberry asks residents to accept that assistance.

Residents are asked to avoid irrigating their lawns and gardens on rainy days. It isn't necessary to water lawns and gardens for at least two days after it rains. Watering isn't needed until the top two inches of soil are dry. It is a good idea to irrigate either early in the morning or later in the evening.

Other helpful tips:

- Use a weather-based irrigation controller that account for changing weather, soil conditions, and plant types.
- Set up a rain barrel to harvest rainwater from gutters for watering gardens and landscapes.
- Check sprinkler systems frequently and adjust so only the lawn is watered.

## KEEP IT FLOWING: DON'T FLUSH 'FLUSHABLE' WIPES

Truth in advertising? Not quite.

They may be convenient, but flushable wipes are not actually flushable. And, they can wreak havoc on resident's pipes and the Township's sanitary sewer system.

To keep Cranberry's sanitary sewer system functioning at maximum capacity, residents are reminded to only flush toilet paper.

Disinfecting wipes or other non-flushable items should be disposed of in the trash. While many sanitary wipes purport to be flushable, overuse of those products can have an impact on sanitary sewer systems – including those within a person's home. Fixing these backups is costly and time consuming.

Flushing only toilet paper helps ensure that the toilets, plumbing, sewer systems and septic systems will continue working properly to safely manage wastewater.
