

IT'S GOOD TO VENT

Even the coolest, calmest person needs to vent every now and then.

The same goes for yard vent caps that relieve air pressure in household sewer systems. Now is as good a time as any to check and replace those caps if needed.

The caps allow sewer gases to vent out rather than enter a building. They also keep water from entering the sanitary sewer line, causing that water to be treated and unnecessarily increasing the load on the sewer system. Ultimately, that could lead to increased sewer costs and ultimately higher rates.

DON'T WASTE WATER: CONSERVE DURING HOT PERIODS

Everyone likes a green, lush lawn. Everyone also likes to have water flow when they turn on their faucets.

As sweltering summer weather reaches its peak, there are a few steps customers can take to stop potential shortages before they start and save money in the process.

- Water early in the morning, which ensures more water soaks into the lawn or garden.
- If using a sprinkler system, set a timer and make sure the system is in good working order.
- Fix leaking spigots, and occasionally check for leaks in hoses and lines.
- Use a rain barrel or other system to recycle rainwater.
- Use landscaping, mulch, and flower beds to keep water within the soil.
- Use a broom or leaf blower to clear debris instead of a hose.
- Cut grass on a higher mower setting. This allows the grass to grow deeper roots and become more resilient.
- A simple test for checking if the lawn needs water: Step on it. If the grass springs back, it doesn't need watered.

These simple tips will help keep lawns looking lush and water flowing freely for everyone.

WEST VIEW TO CONDUCT LEAD AND COPPER SAMPLING

The Township's water provider, West View Water, will conduct lead and copper sampling of its distribution system as required by the Environmental Protection Agency and Pennsylvania Department of Environmental Protection.

West View Water is required to collect 50 samples every three years. The sample locations are chosen from residential properties throughout the distribution system that are currently connected to lead service lines.

Despite favorable results during the 2019 sampling period, West View Water is replacing several hundred lead service line connections in 2022.

This proactive approach will help the Authority meet the stricter guidelines regulating lead and copper in community water systems set to be implemented in 2024.

Cranberry Township has been participating in the EPA lead and copper program since 1991. Recently, 30 samples were collected, and all sample sites met EPA standards and indicated good water quality.
